

Integrity Fusion Products offers a full line of **Heavy-Duty ANSI/ASME B1.20.1 Male NPT, Internally and Externally Epoxy Coated ASTM A106/A5 Schedule 40 Carbon Steel** HDPE Transition Fittings. **Integrity Fusion Products Heavy-Duty Transition Fittings** provide a robust mechanical joint built around an internally machined and beveled groove design, allowing it to operate at the MAOP (*maximum allowable operating pressure*) of the inserted HDPE pipes SDR. **Integrity Fusion Products Heavy-Duty Transition Fittings** are designed to provide complete, unobstructed HDPE coverage through the ID of the transition collar for total corrosion protection, providing you with a **piggable** seal plus a pipe restraint rating equivalent to the expected thermal stresses that occur in a pipeline. **Integrity Fusion Heavy-Duty Transition Fittings** meet or exceed the **ASTM D2513 Category 3** mechanical joint requirements (**this fitting CANNOT be used in natural gas applications**) and are manufactured in a variety of nominal pipe sizes and SDR's. **Integrity Fusion Products Heavy-Duty Transition Fittings** are manufactured and tested to meet the requirements of **ASTM D3261, ASTM 1598, ASTM 1599, ANSI/AWWA C901, C906, and NSF/ANSI/ CAN-61, and NSF/ANSI-372 (where applicable)**, for use with outside diameter-controlled pipe and fittings conforming to **ASTM D2513, ASTM D3035, and ASTM F-714**. **Integrity Fusion Products Heavy-Duty Transition Fittings** can be heat fused to any manufacturers' PE pipe, molded fittings, or fabricated fittings manufactured from material made from PE3408 / PE4710 / PE100 resin that complies to **ASTM D3350**. **Integrity Fusion Products Heavy-Duty Transition Fittings** are also available in a **Heavy-Duty Weld-End** and **Heavy-Duty Cut Groove** design.

Steel to HDPE Transition Fittings manufactured by Integrity Fusion Products, are all-purpose, steel to HDPE mechanical transition fittings that are designed and manufactured for use in applications that include, but are not limited to:

- Oil and gas production
- Municipal potable water distribution and service lines
- Saltwater Disposal
- Irrigation
- Mining
- Geothermal
- Dredging
- Wastewater conveyance
- Process Lines
- Industrial piping applications
- Landfill
- Telecom Conduit

NOTE: When installing the standard transition fitting, the installer should always use pipe joint sealant or Teflon tape on the threads. First, hand tighten the transition fitting and then use two (2) strap wrenches to tighten the transition fitting the rest of the way. **DO NOT USE PIPE WRENCHES (only use strap wrenches). Pipe wrenches can deform the transition sleeve and result in compromising the seal created between the tightly pressed pipe and internally machined and beveled grooves creating a potential leak path. Over tightening may also damage the transition collar a cause ovality or damage. Always pressure test for leaks before backfilling.** Backfill and compact carefully around transition and service line to prevent ground shifts which could damage the valve and/or transition fitting.

Male (MIPT) NPT Transitions

SDR 17 (standard dimension ratio)
